

Experience

SOMERS AND BLATT

Full Stack Engineer (Full-Time) | NOV 2025 – MAY 2026

- Designed and developed a custom CRM platform from the ground up for an Australian law firm to manage legal services including Conveyancing, Wills, Contract Review, and Legal Advice.
- Built and maintained full-stack web applications using React, Next.js, and PostgreSQL to support scalable legal operations and workflow management.
- Deployed and managed application infrastructure using Google Cloud Google Compute Engine for hosting backend services and production environments.
- Automated repetitive business and legal workflows using n8n, significantly improving operational efficiency and reducing manual administrative work.
- Developed a secure client and mortgage broker portal integrated with the CRM system, enabling real-time tracking of Conveyancing, Wills, Contract Review, and Legal Advice matters.
- Integrated legal industry platforms including FuseSign for digital document signing and client e-signature processing.
- Integrated PEXA APIs to synchronize settlement information, professional fees, disbursement fees, and related conveyancing data into internal systems.
- Utilized LEAP Conveyancing APIs to automate conveyancing workflows and centralize client matter information within the CRM and portal platforms.
- Designed and implemented API integrations between third-party legal systems and internal applications to improve data consistency, workflow automation, and reporting accuracy.
- Collaborated closely with legal staff, conveyancers, and business stakeholders to translate operational requirements into scalable technical solutions.
- Contributed to system architecture, database design, API development, deployment, maintenance, and ongoing feature enhancements across multiple legal technology platforms.
- Utilized AI services (Google Gemini and OpenAI) to analyze contracts and automate legal processes.

NEC CORPORATION

Software Engineer (Contract) | OCT 2022 – MAR 2024

- Enhanced UI Path automation workflows to streamline repetitive administrative processes.
- Increased reliability of scheduled automations, reducing manual task time.
- Built and maintained docker environments for relational and non-relational databases, ensuring reliable test and production workflows.
- Customized MongoDB Docker images with pre-configured data schemas and init scripts to support unique client needs.
- Deployed containerized databases in both testing and production environments to improve consistency.
- Developed an internal automation testing framework using Robot Framework and Python to replace manual regression tests.
- Decreased testing cycle time through automation improving reliability and coverage.

LANEX CORPORATION

Software Engineer (Full-time) | AUG 2022 – APR 2025

- Developed and maintained a desktop application using Electron to monitor hardware and software integrity for more than 100+ devices.
- Integrated PostgreSQL backend and RESTful APIs to applications for real-time diagnostics and performance data.
- Engineered optimized AI prompt templates for internal chatbots leveraging OpenAI and Flowise, improving response relevance.
- Performed data-driven A/B testing to fine-tune prompts to achieve correct intent recognition.
- Built a reusable Flutterflow web app template designed for rapid chatbot project deployment.
- Modularized UI components and back-end APIs, expediting new project setup time.
- Designed and developed a full-featured e-commerce ordering portal with cart, checkout, and shipment tracking modules.
- Integrated truck container visualization to visualize space covered in the container upon order selection.

Web Developer (Internship) | SEP 2021 – MAR 2022

- Designed and developed a full-stack inventory management system using Laravel and MySQL, replacing manual spreadsheets with a centralized digital solution.
- Implemented CRUD operations and a secure authentication module to manage device allocation and maintenance records.
- Collaborated with IT and operations teams to gather requirements, test modules, and ensure smooth deployment.

Skills

Soft-skills: Self-initiative, highly committed, resourcefulness, problem solver, and fast learner

Frontend: VueJS, NuxtJS, NuxtUI, Prime Vue, Inspira UI, React, NextJS, Flutter Flow, Tailwind, Bootstrap

Backend: Laravel (Vanilla), Laravel JSON:API, Express, Flask, NodeJS, NextJS

DevOps : Docker

Databases: PostgreSQL, MySQL, MongoDB, Firebase

Languages: JavaScript, TypeScript, Python, Java, PHP, C, C#

Automation Tools: Robotframework, UI Path, N8N

SCM: Github, Gitlab

Project Management Tools: Jira, Trello

Google Services: Google Compute Engine, Google APIs

AWS Services: S3

AI: Flowise, OpenAI, Gemini

Education

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

University of San Carlos – Talamban Campus

Cebu City, Philippines

Publications

AN EMPIRICAL ANALYSIS OF USING BLOCKCHAIN TECHNOLOGY IN E-VOTING SYSTEMS

IEEE – Dec 1, 2021
